

Ibrahim Abdulazeez

Email address: waleibrahim13@gmail.com Web: <https://www.linkedin.com/in/ibrahim-abdulazeez/>

Profile

Senior Software Engineer and AI Engineer with 9+ years of experience building production systems across frontend, backend, cloud, and AI-enabled applications. Recent specialization includes LLM applications, agent workflows, retrieval systems, and deploying AI features into production environments. Experienced in leading technical initiatives, mentoring engineers, and delivering products from concept to scale.

Technical Expertise

- AI ENGINEERING

LLM application development	Prompt engineering	Agent-based architectures	Multi-agent orchestration
Retrieval Augmented Generation(RAG)	LangChain	AutoGen and related agent tooling	Vector databases (Pinecone, Weaviate)
LLM evaluation and experimentation	AI support automation	AI observability	

- FRONTEND TECHNOLOGIES

React	Redux	TypeScript	JavaScript (ES6+)
HTML5	CSS3		

- BACKEND TECHNOLOGIES

Python	Node	Express	FastAPI
RESTful APIs	GraphQL		

- DATABASES

MongoDB	PostgreSQL	DynamoDB	
---------	------------	----------	--

- TESTING & QUALITY

Jest	E2E Testing	Unit Testing	
------	-------------	--------------	--

- DEVOPS & CLOUD

Git	Github Actions	CI/CD	GCP
AWS			

- DELIVERY

Agile	Scrum	Technical Leadership	
-------	-------	----------------------	--

Professional Experience

2023 – 2026
Remote, Nigeria

Senior Frontend Engineer

TalentUp Africa

Led frontend architecture and AI product initiatives for a recruitment platform serving African markets.

- Led frontend delivery across multiple product streams and improved candidate-to-employer matching efficiency by 35%.
- Introduced AI-enabled candidate evaluation workflows and improved screening accuracy by 40%.
- Improved recommendation and matching performance by 30% through AI-assisted decision systems.
- Designed scalable frontend architecture that supported 50% growth in concurrent platform usage.
- Partnered with product and design leadership to improve engagement metrics by 25%.
- Mentored junior engineers and introduced engineering standards that reduced review cycles by 20%.
- Participated in technical planning, architecture decisions, and roadmap execution.

Technology:

- React, Redux, TypeScript, AI integrations, AWS

 Professional Experience

2021 – 2023
Remote, United States

Frontend Engineer

Modus Create

Key Project: LightBox Property Valuation Platform

- Built production features for large-scale property valuation and research workflows.
- Developed React applications integrated with mapping and valuation services.
- Improved property data quality by 30%.
- Increased platform engagement by 25%.
- Introduced testing and deployment improvements that reduced production defects by 40%.
- Collaborated across engineering, design, and product teams to deliver ahead of schedule.

Technology:

React, Redux, Bing Maps API, CI/CD

2017 – 2020
Lagos, Nigeria

Software Engineer

Andela Talent Accelerator

Project: Quartet Health

- Delivered healthcare collaboration features supporting 500+ practitioners and patients.
- Built 15+ production features across frontend and backend systems.
- Improved user engagement by 30%.
- Implemented automated testing and reduced defects by 25%.
- Automated deployment workflows and reduced release cycles by 40%.
- Contributed to technical planning and team delivery practices.

Technology:

React, Node.js, Java, PostgreSQL

2014 – 2017
Kano, Nigeria

Lead Technical Instructor

Waifanet Solution

- Designed and delivered a comprehensive coding curriculum for 300+ Nigerian graduates
- Led technical workshops on emerging technologies, increasing team technical proficiency
- Created Microsoft Office training modules for 100+ employees
- Mentored junior instructors and established training best practices

 Education & Certifications

06/2011 – 2014
Plateau, Nigeria

Physics | Bachelor of Science

University of Jos

12/2023 – 12/2023

AWS Cloud Practitioner | Certificate

Amazon Web Services

01/2021 – 02/2021

Innovation for Entrepreneurs | Certificate

University of Maryland

Innovation for Entrepreneurs: From Idea to Marketplace

Developing Innovative Ideas for New Companies

03/2026 – 03/2026

AI Engineer Core Track | Certificate

Udemy

Skills:

- Large Language Models (LLMs)
- Agent Architectures
- AI Application Development

03/2026 – 03/2026

AI for Leaders | Certificate

Udemy

Skills:

- Artificial Intelligence
- AI Strategy
- AI Leadership

10/2025 – 10/2025

Machine Learning | Certificate

Stanford University

Lead AI Engineer

AI Customer Support Automation Platform | Meridian Electronics

Designed and built a production-ready AI customer support platform for Meridian Electronics to automate customer interactions, improve support responsiveness, and enable secure access to operational data through agent workflows.

Problem:

Customer support required a faster and more scalable way to handle product inquiries, order lookups, and customer requests while maintaining response quality and operational controls.

Solution:

Developed an AI chat support solution using Next.js and the OpenAI Agents SDK with streaming interactions, session memory, tool execution via MCP (Model Context Protocol), and production guardrails.

Key Contributions:

- Architected and delivered a real-time support chat application with incremental streaming responses using fetch and ReadableStream.
- Built an agent-driven orchestration layer using the OpenAI Agents SDK to manage conversation execution and tool usage.
- Integrated MCP (Model Context Protocol) tools through MCPServerStreamableHttp to enable secure access to order management, customer verification, product catalog search, and backend services.
- Optimized request processing by sending only the latest user message while preserving historical context in memory sessions.
- Designed and implemented input and output guardrails.
- Implemented request tracing and workflow observability using per-request Runner execution with conversation-level grouping.
- Established local debugging visibility using trace exporters during development.

Architecture Highlights:

Streaming AI responses, Agent orchestration, MCP tool integration, Stateful conversation memory, Guardrails and validation, Observability and tracing, Backend service integration

Business Outcome:

- Reduced manual handling of repetitive customer support requests
- Improved customer response speed
- Enabled self-service order and catalog workflows
